Fast ForWord Use in Schools in British Columbia

- During the 2007-2008 school year, fewer than 250 students used the Fast ForWord products.
- By the 2009-2010 school year, the number of Fast ForWord participants had increased more than 400% to 1,208.
- Since August, 2007, more than 3,000 students in Schools in British Columbia have used the Fast ForWord products.

Participation has Increased > 400%

Fast ForWord Use in British Columbia

- On average, students used the products for 43 days with 74% of the students completing a product.
- Average attendance was 72% which corresponds to missing nearly three days every two weeks (protocols call for using the products 5 days a week).
- Average participation was 92% which corresponds to missing about four minutes each day they are in attendance for students using the 50-Minute Protocols.

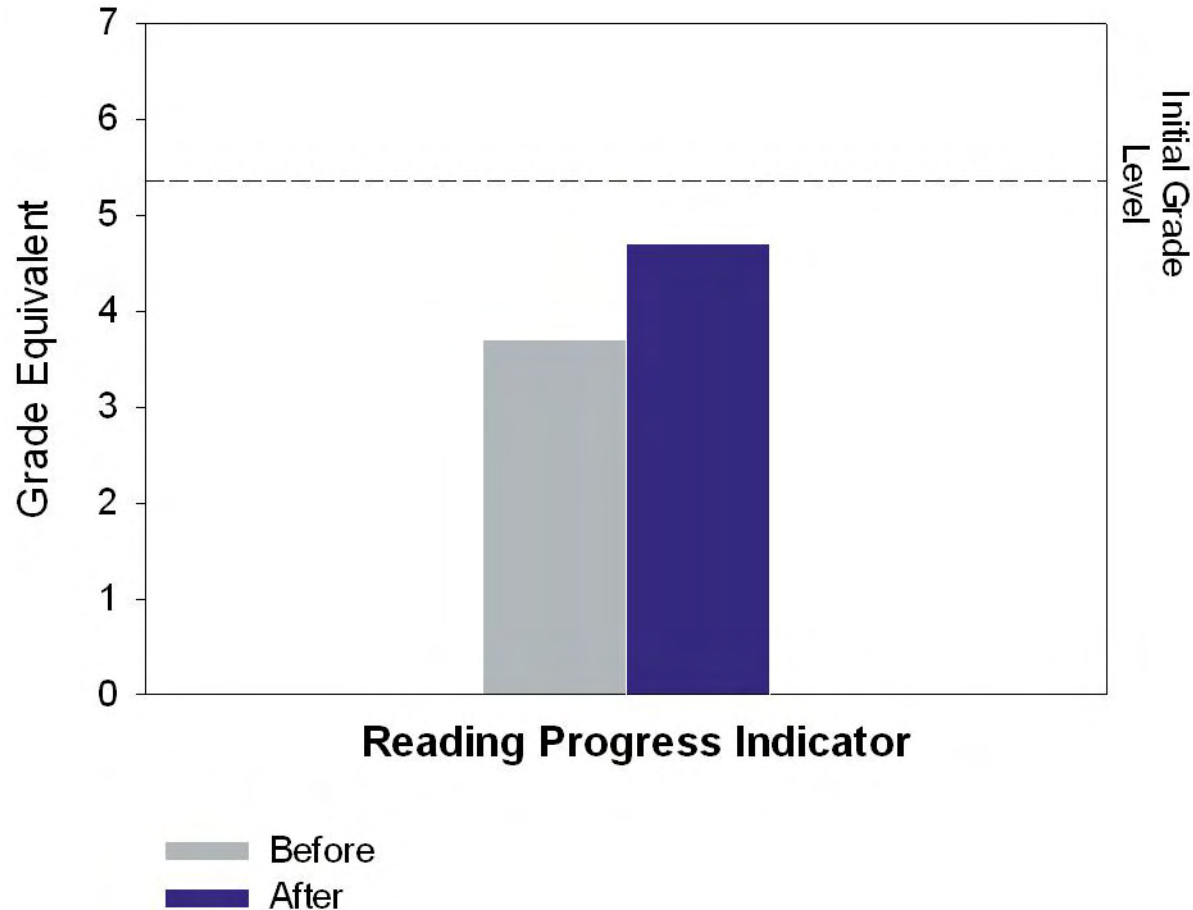

Product Use since Fall, 2007

Number of Students	Average Attendance	Average Participation	Average of Total Days Trained	Average # Of Products Completed	Average Percent Complete Across Products
3140	71.5%	91.5%	42.7	0.74	72.2%

Impact of Fast ForWord Use on Students at BC Schools

- 1,836 students were assessed with Reading Progress Indicator before and after using the Fast ForWord products.
- The students ranged from kindergarten through high school, with an average grade level of early fifth grade.
- At the time of the first assessment, students' skills averaged at the mid-third grade level (approximately 1½ years below grade level).
- In the 3 ½ months between assessments, students' average improvement was one year and one month.
